RIDICULOUSLY SIMPLE BACKUP

AUTOMATICALLY save EVERYTHING, FOR
FAST, INSTANT RECOVERY

What Makes Rebit Better?

Rebit Eliminates Backing up!

Rebit doesn't just make backing up easy – Rebit is the no-backup backup!

You don't really want to backup – It takes time, management, and effort -- every single day. That's why most people don't do it. What you really want is simply to make sure your data is protected and you can keep being productive.

Rebit does just that. Rebit eliminates doing backups, saving you time everyday, and gives you continuous and complete PC protection. So don't backup – Rebit!

Just leave Rebit connected to your PC, and it automatically keeps your entire PC backed up continuously. You get better protection than from traditional backups, and you don't do a thing.

The Complete Data Recovery Solution

Automatic

Just plug-in the Rebit to your PC and that's it! No configuring, no scheduling, no checking just to make sure a "backup" completed and got everything you need. No backup process management. Nothing to remember and nothing to do. Rebit automatically backs up your whole PC so that even the worst catastrophe has a happy ending: fast data recovery and complete system restoration.

Continuous

With ordinary backup software, you're only protected up to the time of your last backup. Rebit keeps you backed up continuously, so you're backed up all of the time! With Rebit, when you save a file multiple times you have multiple backup versions, so you can recover whatever you need, when you need it. With Rebit's continuous data protection, every file is backed up automatically as soon as you save it. So you can recover that file that you just accidentally saved over.

Transparent

No setup, no configuring, no application to learn, use and manage. Rebit integrates with Windows so that you don't even know it's there. Should you need to recover a file or folder, open Windows Explorer and click on the Rebit icon (just remember to click on the Frog!) to see all of your backup files the same way you use Explorer to see your PC files. File recovery is just drag-and-drop

Complete

Rebit doesn't just backup your data – Rebit backs up your entire PC. The operating system, your applications, settings, e-mails, music, photos, movies -- everything! You never need worry about file loss or disk crash again. If a PC disk crashes, you can restore your entire PC to a point in time, saving your data and your productivity.

RIDICULOUSLY SIMPLE BACKUP

**AUTOMATICALLY save EVERYTHING, FOR
FAST, INSTANT RECOVERY**

Rebit – the “un-backup”

Ordinary Backup products make you plug them in, figure out how to use them to meet your needs, and then run them every day to backup your valuable data files. You have to learn, administer, and manage the whole backup process. If you worked all day creating new work, you have to make a backup happen or wait for a scheduled backup to occur before your precious work is protected! To find out if a particular file is backed up or to recover a backed up file is just as complicated and arduous. You have just become your own backup process and data administrator. Not with Rebit.

With ordinary backup products, In the event of a disk crash you must re-load and rebuild your entire PC first, with the operating system, applications, license keys, (whatever ones you have, repurchasing the rest), configure, and set everything back up the way your like it, and then you must recover what backup files you have – hopefully you have backed up to a current day and haven't lost any work or irreplaceable files.. All of that can take days to finish. Not with Rebit

Now, there is an alternative to *backup* products! Rebit is a *data recovery solution*, not a backup tool. With Rebit, you get what you really need -- complete, continuous protection of *everything* on your PC and you don't do a thing to get it. And most importantly, you can easily recover whatever you need, whenever you need it.

Rebit is integrated with Windows, so finding backed up files and folders is as simple as using Windows Explorer and recovering them is just drag-and-drop. Is a file backed up? -- Just hover over the file on your PC and you see when it was backed up and how many versions you have.

Rebit is always on, never fills up, and you won't even know it's there, continuously protecting you.

It's All About Recovery

If an unwelcome event occurs, your files and even your entire computer can be recovered quickly because you don't need to find your software CDs or license keys. You also don't need to reconstruct every other part of your computer first (passwords, drivers, bookmarks, settings...this list never ends). You get your files and your computer back, quickly, just the way it was.

Rebit – the simple, automatic and complete recovery solution
